EDUCATION

Information Security Process

Information Security Processes is a section that really blankets the whole range of actions fused within an audit process.

- As an introductory part the information is collected from the source and preliminary investigation.
 - This information comes from both the ways that is inside and outside of the organization. This information gathering must itself be painstaking and solid.
- It will affect your subsequent results and from that point the whole progress and ultimate **success** of your auditing efforts.

CISA courses are specifically designed for:-

- Security Auditor
- **System Security** professional
- Information security professional
- **Network security** professionals

Sectors of CISA Examination:-

IT field is the major sector which is considered in the CISA examination. It is the key factor for which a business stands. The business components are integrated through the IT domains and they are integrated in the business.

Then the integration is monitored carefully for ensuring that the new components which are made don't have any disruptive impact on the organization. Moreover it is also checked that whether it is changing any feature of the **hardware**, software, personnel or the organization.

Careful plans are made under the decision of project manager for ensuring the smooth running of the business while integration for the external

acquisition. It is checked for the progress and when it gets completed then they are studied carefully and ensured whether they fit into the overall strategic makeup of the organization. Most importantly an organization runs on new projects and the organization is affected by the technological changes in the outside world.
