Mathematics Syllabus

UNIT I – ALGEBRA :

1. **SETS, RELATIONS AND FUNCTIONS**

   (i) Sets and their Representations: Finite and Infinite sets;
   - Empty set;
   - Equal sets;
   - Subsets;
   - Power set;
   - Universal set;
   - Venn Diagrams;
   - Complement of a set;
   - Operations on Sets (Union, Intersection and Difference of Set);

   (ii) Applications of sets: Ordered Pairs,
   - Cartesian Product of Two sets;

   (iii) Relations: Domain,
   - Co-domain and
   - Range

   (iv) Functions: into,
   - on to,
   - one – one in to,
   - one-one on to Functions;
   - Constant Function;
   - Identity Function;
   - composition of Functions;
   - Invertible Functions;
   - Binary Operations.

2. **Complex Numbers** :

   (i) Complex Numbers in the form $a + i b$;
   (ii) Real and Imaginary Parts of a complex Number;
   (iii) Complex Conjugate,
   (iv) Argand Diagram,
   (v) Representation of Complex Number as a point in the plane;
   (vi) Modulus and Argument of a Complex Number;
   (vii) Algebra of Complex Numbers;
   (viii) Polar Representation of a Complex Number.

3. **Quadratic Equations** :

(i)   Solution of a Quadratic Equation in the Complex Number System by Factorization
      Using Formula;
(ii) Relation between Roots and Coefficients;
(iii) Nature of Roots;
(iv) Formation of Quadratic Equations with given Roots;
(v)   Equations Reducible to Quadratic Forms.

4.   Sequences and Series :

(i)   Sequence and Examples of Finite and Infinite Sequences;
(ii) Arithmetic Progression (A..P): First Term,
                              Common Difference,
                              nth Term and
                              sum of n terms of an A.P.;
(iii) Arithmetic Mean (A.M);
(iv) Insertion of Arithmetic Means between any Two given Numbers;
(v)   Geometric Progression (G.P): first Term,
                              Common Ratio and
                              nth term,
                              Sum to n Terms,
                              Geometric Mean (G.M);
(vi) Insertion of Geometric Means between any two given Numbers.

5.   Permutations, Combinations, Binomial Theorem and Mathematical Induction :

(i)   Fundamental Principle of Counting;
(ii)   The Factorial Notation;
(iii) Permutation as an Arrangement;
(iv)   Meaning of $P(n, r)$;
(v)   Combination: Meaning of $C(n,r)$;
(vi)   Applications of Permutations and Combinations.
(vii) Statement of Binomial Theorem;
(viii) Proof of Binomial Theorem for positive integral Exponent using Principle of Mathematical Induction and also by combinatorial Method;
(ix)   General and Middle Terms in Binomial Expansions;
(x)   Properties of Binomial Coefficients;
(xi)   Binomial Theorem for any Index (without proof);
(xii) Application of Binomial Theorem.
(xiii) The Principle of Mathematical Induction,
(xiv) simple Applications.

6.   Matrices and Determinants :

(i)   Concept of a Matrix;
(ii) Types of Matrices;
(iii) Equality of Matrices (only real entries may be considered): Operations of Addition,

Scalar Multiplication and Multiplication of Matrices;

(iv) Statement of Important Results on operations of Matrices and their Verifications by Numerical Problem only;
(v)   Determinant of a Square Matrix;
(vi) Minors and Cofactors;
(vii) singular and non-singular Matrices;
(viii) Applications of Determinants in (i) finding the Area of a Triangle
                              (ii) solving a system of Linear Equations
                                  (Cramer's Rule);
(ix) Transpose, Adjoint and Inverse of a Matrix;
(x)   Consistency and Inconsistency of a system of Linear Equations;
(xi) Solving System of Linear Equations in Two or Three variables using Inverse of a Matrix (only up to 3X3 Determinants and Matrices should be considered).

7.   **Linear Inequations** :

(i)   Solutions of Linear Inequation in one variable and its Graphical Representation;
(ii) solution of system of Linear Inequations in one variable;
(iii) Graphical solutions of Linear inequations in two variables;
(iv) solutions of system of Linear Inequations in two variables.

8.   **Mathematical Logic and Boolean Algebra**

(i)   Statements;
(ii) use of Venn Diagram in Logic;
(iii) Negation Operation;
(iv) Basic Logical Connectives and Compound Statements including their Negations.

UNIT II :- TRIGONOMETRY :

1.   **Trigonometric functions and Inverse Trigonometric functions**

Degree measures and Radian measure of positive and negative angles; relation between degree measure and radian measure, definition of trigonometric functions with the help of a unit circle, periodic functions, concept of periodicity of trigonom etric functions.

2.   Trigonometric functions of multiple and submultiples of numbers.

3.   Inverse Trigonometric functions

UNIT III:- GEOMETRY :

1.   Cartesian System of Rectangular Co ordinates :

   (i)   Cartesian system of co ordinates in a plane,
   (ii)   Distance formula,
   (iii) Centroid and incentre,
   (iv)   Area of a triangle,
   (v)   condition for the collinearity of three points in a plane,
   (vi)   Slope of line,
   (vii) parallel and perpendicular lines,
   (viii) intercepts of a line on the co - ordinate axes,
   (ix)   Locus and its equation.

2.   Lines and Family of lines :

   (i)   Various forms of equations of a line parallel to axes,
   (ii)   slope-intercept form,
   (iii) The Slope point form,
   (iv)   Intercept form,
   (v)   Normal form,
   (vi)   General form,
   (vii) Intersection of lines.
   (viii) Equation of bisectors of angle between two lines,
   (ix)   Angles between two lines,
   (x)   condition for concurrency of three lines,
   (xi)   Distance of a point from a line,
   (xii) Equations of family of lines through the intersection of two lines.

3.   Circles and Family of circles :

   (i)   Standard form and General form of the equation of a circle,
   (ii)   Radius and center of the circle,
   (iii) Equation of the circle in the parametric form.

4.   Conic sections :

   (i)   Sections of a cone.
   (ii)   Equations of conic sections [Parabola, Ellipse and Hyperbola] in standard form.

5.   **Vectors** :

    (i)   Vectors and scalars,
    (ii)   Magnitude and Direction of a vector,
    (iii) Types of vectors (Equal vectors, unit vector, Zero vector).
    (iv) Position vector of a point,
    (v)   Localized and free vectors,
    (vi) parallel and collinear vectors,
    (vii) Negative of a vector,
    (viii) components of a vector,
    (ix) Addition of vectors,
    (x)   multiplication of a vector by a scalar,
    (xi) position vector of point dividing a line segment in a given ratio,
    (xii) Application of vectors in geometry.
    (xiii) Scalar product of two vectors,
    (xiv) projection of a vector on a line,
    (xv) vector product of two vectors.

6.   **Three Dimensional Geometry**

    (i)   Coordinate axes and coordinate planes in three dimensional space,
    (ii)   coordinate of a point in space,
    (iii) distance between two points,
    (iv) section formula,
    (v)   direction cosines and direction ratios of a line joining two points,
    (vi) projection of the join of two points on a given line,
    (vii) Angle between two lines whose direction ratios are given,
    (viii) Cartesian and vector equation of a line through
          (i) a point and parallel to a given vector
          (ii) through two points,
    (ix) Collinearity of three points,
    (x)   coplanar and skew lines,
    (xi) Shortest distance between two lines,
    (xii) Condition for the intersection of two lines,
    (xiii) Carterian and vector equation of a plane
          (i) When the normal vector and the distance of the plane from the origin is given
          (ii) passing though a point and perpendicular to a given vector
          (iii) Passing through a point and parallel to two given lines through
          the intersection of two other planes
          (iv) containing two lines
          (v) passing through three points,
    (xiv) Angle between
          (i) two lines
          (ii) two planes

        (iii) a line and a plane,

(xv) Condition of coplanarity of two lines in vector and Cartesian form,

(xvi) length of perpendicular of a point from a plane by both vector and Cartesian methods.

UNIT IV: STATISTICS

1.   Statistics and probability

(i)   Mean deviation for ungrouped data,

(ii)   variance for grouped an ungrouped data,

(iii) standard deviation.

(iv) Random experiments and sample space,

(v)   Events as subset of a sample space,

(vi) occurrence of an event,

(vii) sure and impossible events,

(viii) Exhaustive events,

(ix) Algebra of events,

(x)   Meaning of equality likely outcomes,

(xi) mutually exclusive events.

(xii) Probability of an event;

(xiii) Theorems on probability;

(xiv) Addition rule,

(xv) Multiplication rule,

(xvi) Independent experiments and events.

(xvii)Finding P (A or B), P (A and B),

(xviii)random variables,

(xix) Probability distribution of a random variable

UNIT V : CALCULUS

1.   Functions, Limits and continuity

(i)   Concept of a real function; its domain and range;

(ii)   Modulus Function,

(iii) Greatest integer function: Signum functions;

(iv) Trigonometric functions and

(v)   inverse trigonometric functions and their graphs;

(vi) composite functions,

(vii) Inverse of a function.

(viii) Limits at Infinity and infinity limits;

(ix) continuity of a function at a point, over an open/ closed interval;

(x)   Sum, Product and quotient of continuous functions;

(xi) Continuity of special functions- Polynomial, Trigonometric, exponential, Logarithmic and Inverse trigonometric functions.

2. Differentiation :

(i)   Derivative of a function;
(ii)   its geometrical and physical significance;
(iii) Relationship between continuity and differentiability;
(iv)   Derivatives of polynomial,
(v)   basic trigonometric, exponential, logarithmic and inverse trigonometric functions from first principles;
(vi)   derivatives of sum, difference, product and quotient of functions;
(vii) derivatives of polynomial, trigonometric, exponential, logarithmic, inverse trigonometric and implicit functions;
(viii) Logarithmic differentiation;
(ix)   derivatives of functions expressed in parametric form;
(x)   chain rule and differentiation by substitution;
(xi)   Derivatives of Second order.

3. Application of Derivatives :

(i)   Rate of change of quantities;
(ii)   Tangents and Normals;
(iii) increasing and decreasing functions and sign of the derivatives;
(iv)   maxima and minima;
(v)   Greatest and least values;
(vi)   Rolle's theorem and Mean value theorem;
(vii) Approximation by differentials.

4. Indefinite Integrals :

(i)   Integration as inverse of differentiation;
(ii)   properties of integrals;
(iii) Integrals involving algebraic, trigonometric, exponential and logarithmic functions;
(iv)   Integration by substitution; Integration by parts; Integrals of the type.

5. Definite Integrals :

(i)   Definite integral as limit of a sum;
(ii)   Fundamental theorems of integral calculus without proof);
(iii) Evaluation of definite integrals by substitution and by using the following properties.
(iv)   Application of definite integrals in finding areas bounded by a curve, circle, parabola and ellipse in standard form between two ordinates and x-axis;

(v) Area between two curves, line and circle; line and parabola: line and ellipse

6.   Differential Equations :

(i)   Definition;
(ii)   order and degree;
(iii) general and particular solutions of a differential equation;
(iv) formation of differential equations whose general solution is given;
(v)   solution of differential equations by method of Separation of variables;
(vi) Homogeneous differential equations of first order and their solutions;
(vii) Solution of linear differential equations
